## ABOUT ME

---

Full-stack developer with 1.5 years of experience building web applications across startup and government technology environments. I work across the entire stack, from designing APIs and modeling PostgreSQL databases to building React interfaces used by real people. My toolkit includes React, Next.js, Node, Express, PostgreSQL, and Applied AI. I do my best work on small teams where ownership and versatility matter more than titles.

## TECHNICAL SKILLS

---

### Front-End

- React, Next.js, TypeScript, Tailwind CSS, Bootstrap

### Back-End

- Node.js, Express.js, PostgreSQL, MongoDB, AWS, S3, SQS, SNS, EC2

### Tools

- Git, GitHub, Figma

## PROFESSIONAL EXPERIENCE

---

### Full-Stack Software Engineer

09/2025 – Present | Remote

*HOTB Software*

- Developed a RAG-enabled AI support agent using AWS Bedrock to surface contextual answers from our application documentation to reduce support burden on our customer service staff.
- Architected a cross-organization data migration system using S3 to reduce onboarding time for new tenants, and to enable QA to gather environment snapshots that eliminated manual data recreation for bug reproduction.
- Drove test coverage across application submission pipelines from minimal to comprehensive, building integration tests to catch regressions in critical flows before reaching production.

### Full-Stack Software Engineer

09/2024 – 08/2025

*Quantiiv*

- Architected a multi-tenant restaurant analytics dashboard using React, Next.js and Supabase serving 20+ quick service restaurant chains.
- Designed and developed RESTful API supporting tenant-isolated data access, enabling secure role-based retrieval of sales and pricing analytics.
- Designed interactive dashboards enabling non-technical operators to monitor revenue trends and act on data-driven pricing recommendations.

## EDUCATION

---

### Web Development Bootcamp

05/2024 – 09/2024 | Irvine, CA

*LearningFuze*

### B.S. Health Sciences

*Chapman University*
